Hunter Outcome Survey (HOS): A Global, Multi-Center, Long-Term, Observational Survey of Patients with Hunter Syndrome (Mucopolysaccharidosis II)

IRB# 2006-067
Principal Investigator: Paul Harmatz, MD

Synopsis:
The objectives of the survey are: to describe the population of patients affected with this disease; to enhance the understanding of its natural history, including intra- and interfamilial variations; to collect data on the long-term follow-up of idursulfase treatment of patients with Hunter syndrome; to evaluate the impact of therapeutic intervention on the clinical course of Hunter syndrome; to provide high quality data and analyses to enable the continuous improvement of Hunter syndrome treatment; to monitor the safety and efficacy of idursulfase enzyme replacement therapy in order to fulfill the company’s regulatory obligations; to provide a basis for the development of clinical management guidelines for Hunter syndrome.
