

Feasibility of Forearm Ultrasonography-Guided Nerve Blocks of Radial, Ulnar, and Median Nerves for Hand Procedures in the Pediatric Emergency Department

IRB# 2008-013

Principal Investigator: Jason Fischer, MD

Synopsis:

The purpose of this study is to determine the feasibility of forearm ultrasonography-guided nerve blocks of the radial, ulnar, and median nerves, performed by emergency physicians, to provide procedural anesthesia in the hand of pediatric patients in the pediatric ED.
