

**Title: Treatment of Children with Newly-Diagnosed Low Stage Lymphocyte Predominant Hodgkin Disease (LPHD) (AHOD03P1)**

**IRB# 2010-002**

**Principal Investigator: Carla Golden, MD**

**Synopsis:**

The goals of this study are to see if late effects can be lowered or prevented by using less chemotherapy and radiation and to find out if using less chemotherapy and radiation to treat LPHD will still show high cure rates. Some subjects will get no chemotherapy or radiation if only one lymph node was affected by LPHD and a surgeon completely removed it.
